# UVA CS 4774: Machine Learning

## S6: Lecture 26: Review

Dr. Yanjun Qi

University of Virginia  
Department of Computer Science

# Final Review

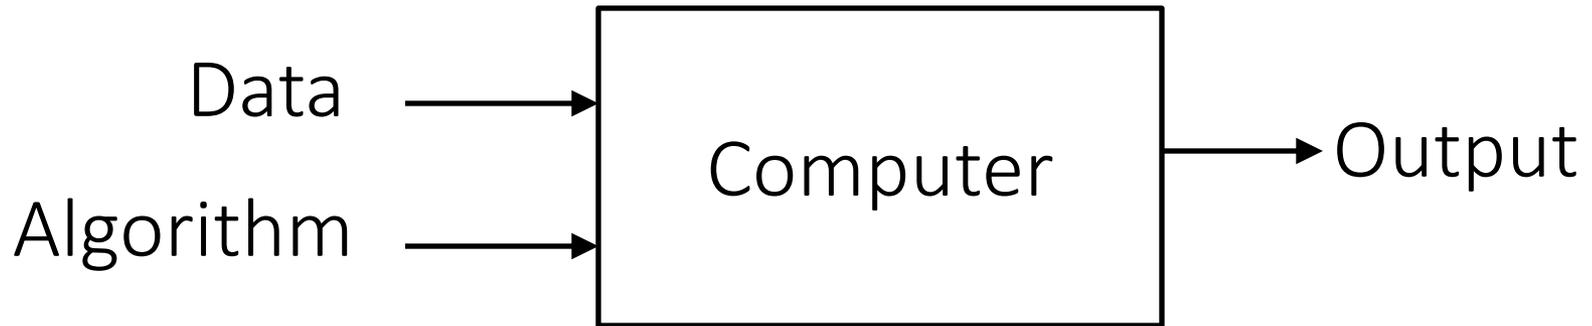

- ❑ Review of covered so far
- ❑ Five Tribes of Machine Learning
- ❑ Four books to recommend

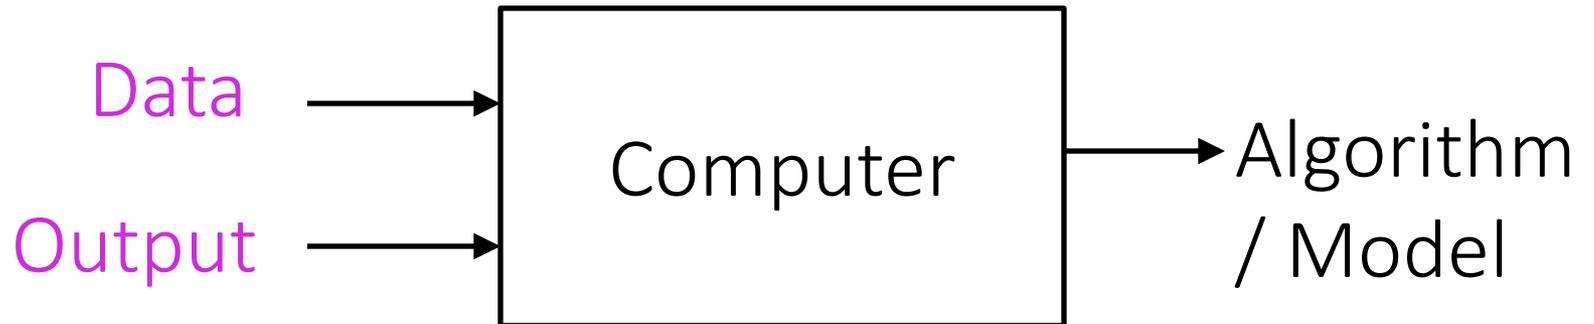

# Objective

- To help students be able to build machine learning tools
  - (not just a tool user!!!)
- Key Results:
  - Able to build a few simple machine learning methods from scratch
  - Able to understand a few complex machine learning methods at the source code and equation level

## Traditional Programming

## Machine Learning

# Digital Over Physical: Lots of Data

## Who has:

Cable or satellite TV

Internet

2+ cell phones

Premium TV (HBO)

Internet TV (Netflix)

+

XM Radio

---

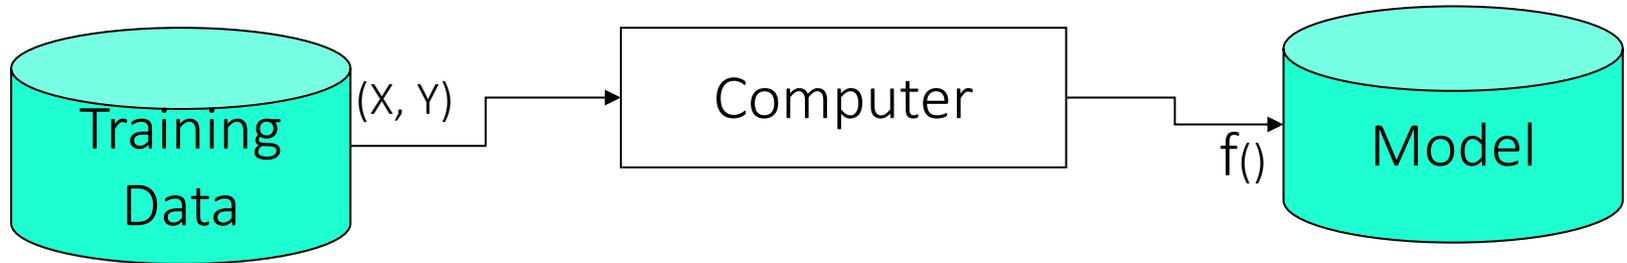

Almost all aspects of  
planet earth go digital NOW

➔ Accessible and Large Amount of  
Data Samples, Streams, ...

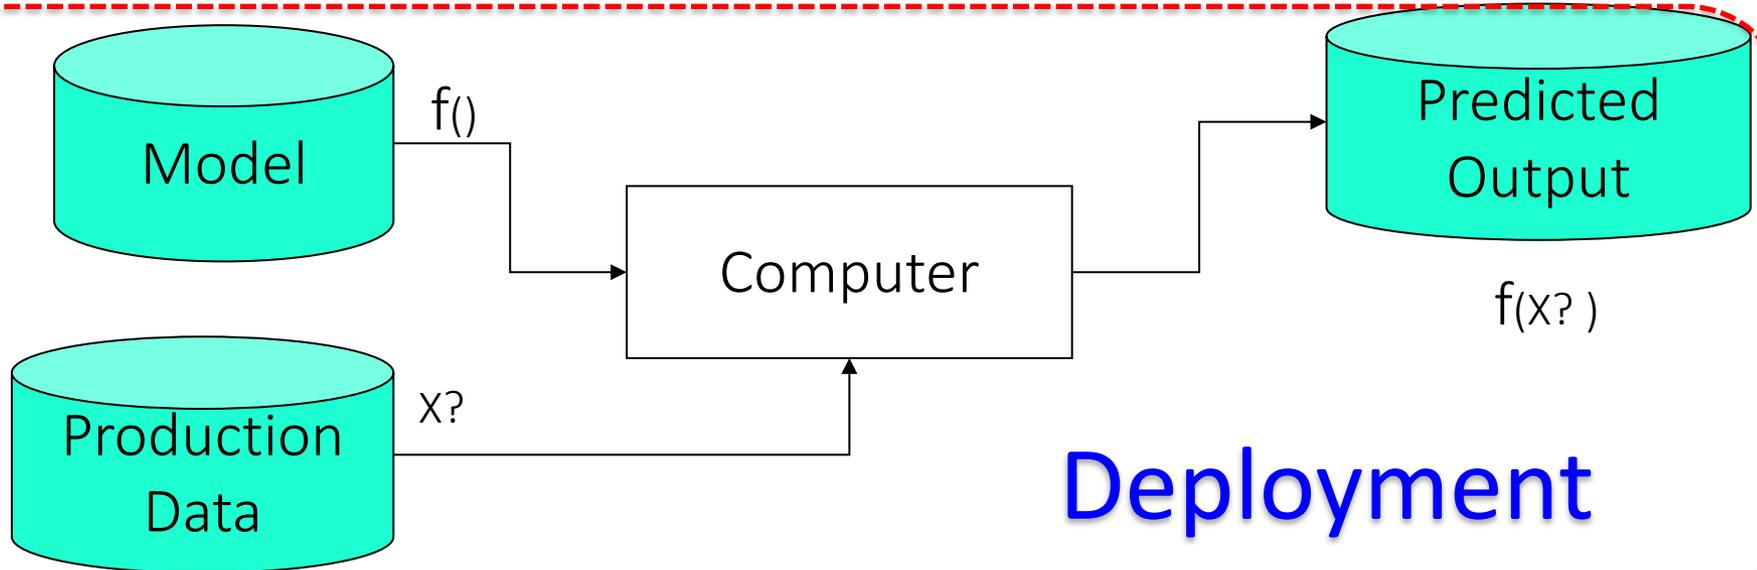

# Two Modes of Machine Learning

Consists of **input-output** pairs

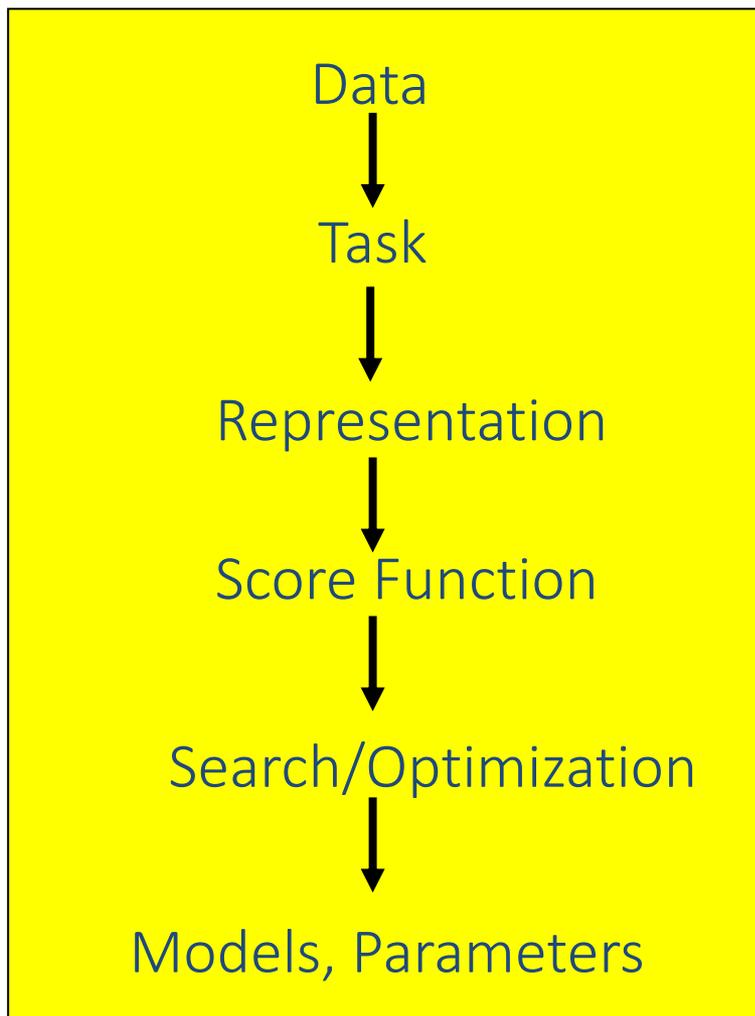

## Training

## Deployment

# Machine Learning in a Nutshell

ML grew out of work in AI

Optimize a performance criterion using example data or past experience,

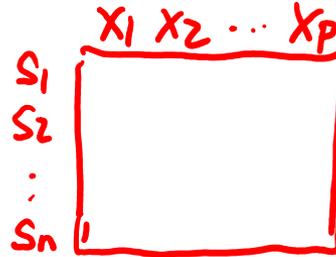

Aiming to generalize to unseen data

# Rough Sectioning of this Course

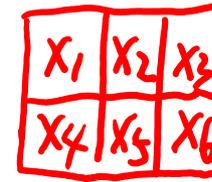

- S1. Basic Supervised Regression + Tabular Data
- S2. Basic Deep Learning + 2D Imaging Data
- S3. Generative and Deep + 1D Sequence Text Data
- S4. Advanced Supervised learning + Tabular Data
- S5. Not Supervised
- S6: Wrap Up + (a few invited tasks, e.g. on AWS)

# Course Content Plan → Regarding Data

❑ Tabular / Matrix

❑ 2D Grid Structured: Imaging

❑ 1D Sequential Structured: Text

❑ Graph Structured (Relational)

❑ Set Structured / 3D /

# Course Content Plan → Regarding Tasks

❑ Regression (supervised)

← Y is a continuous

❑ Learning theory

← About  $f()$

❑ Classification (supervised)

← Y is a discrete

❑ Unsupervised models

← NO Y

❑ Graphical models

← About interactions among  $Y, X_1, \dots, X_p$

❑ Reinforcement Learning

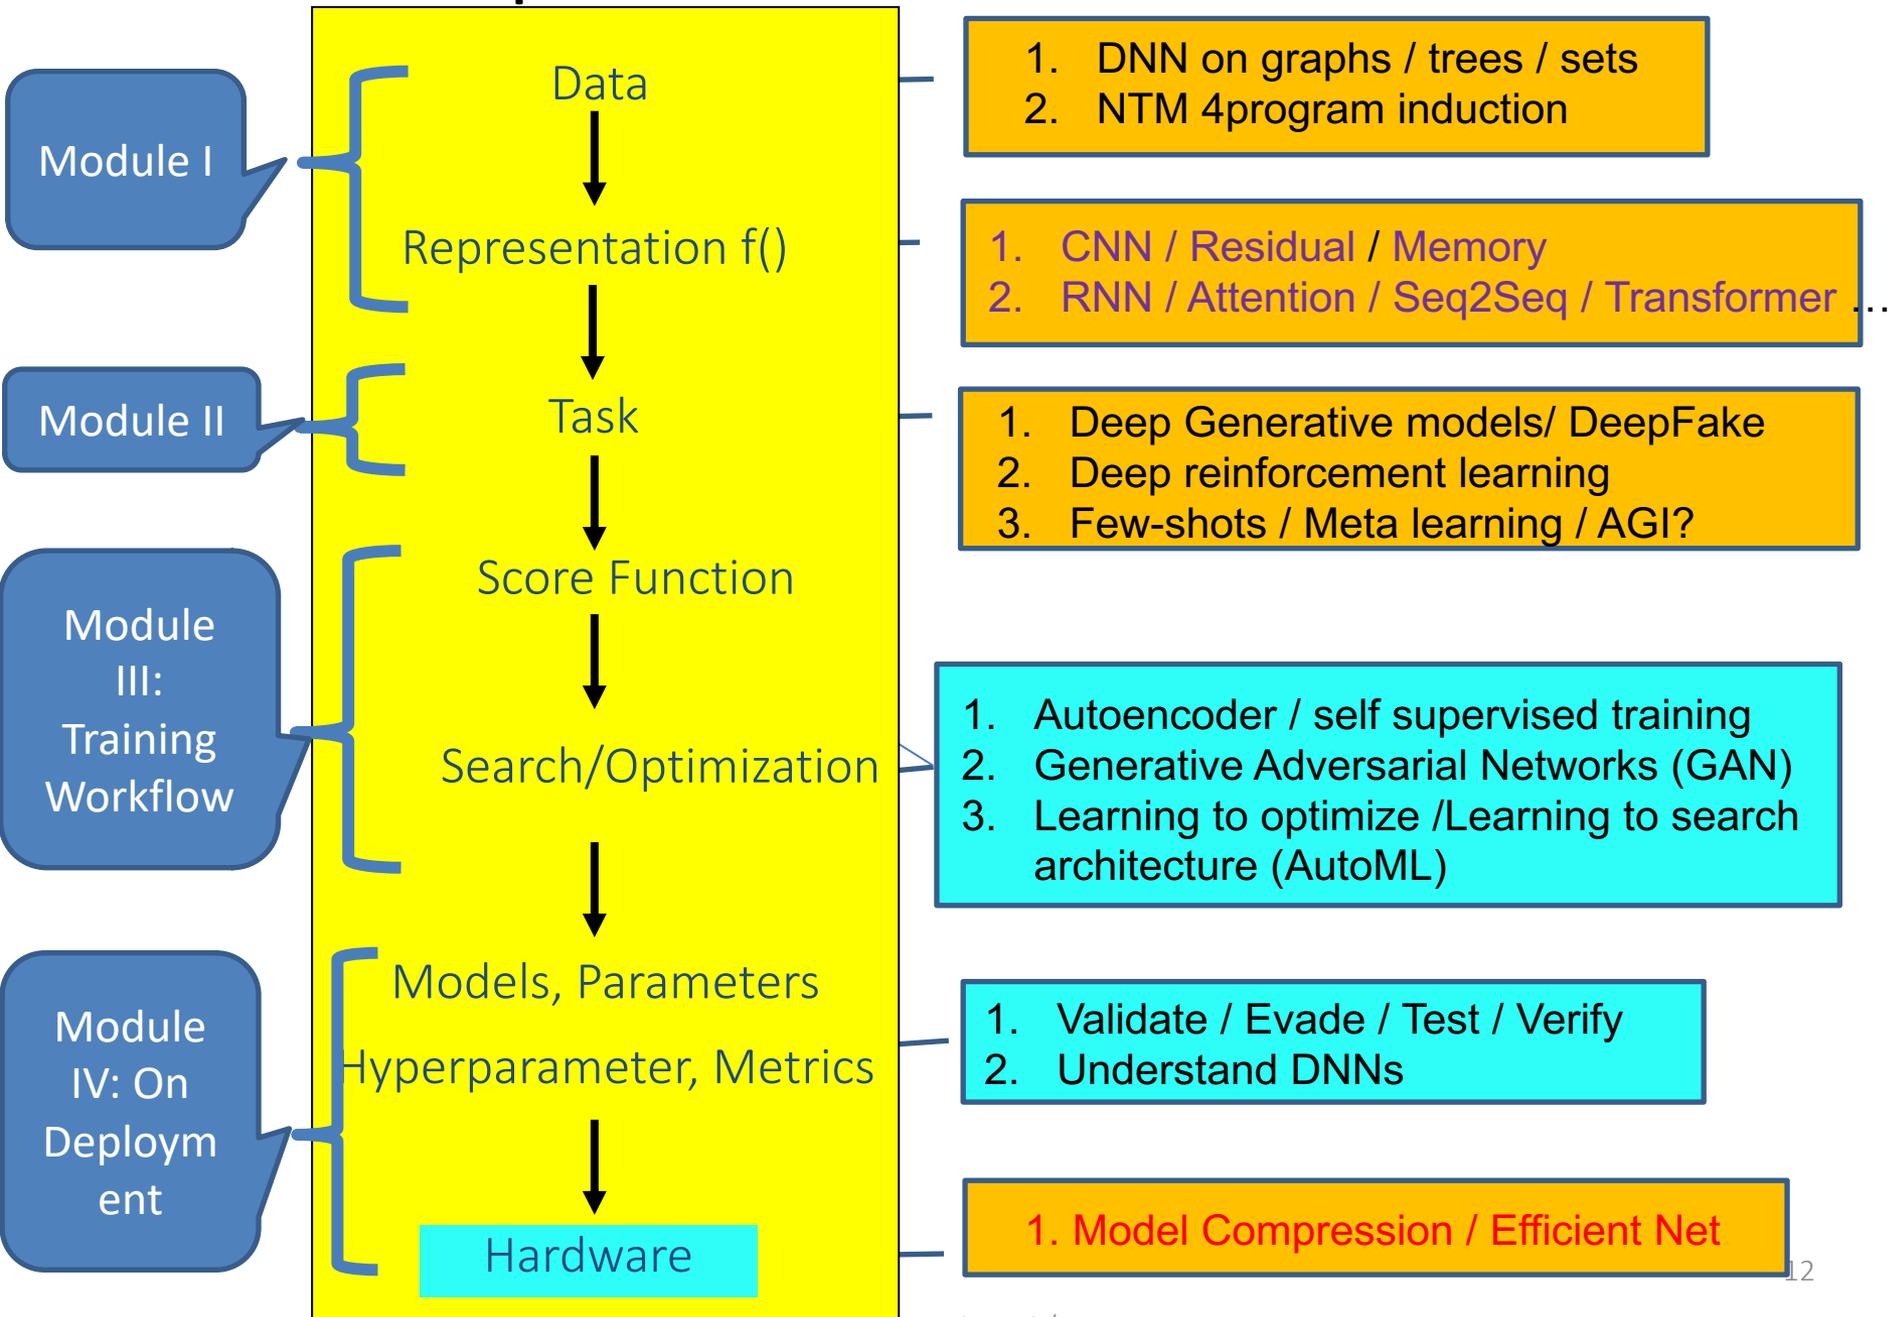

← Learn to Interact with environment

# Three major sections for classification

- We can divide the large variety of classification approaches into **roughly three major types**
  1. Discriminative
    - directly estimate a decision rule/boundary
    - e.g., logistic regression, neural networks
    - e.g., support vector machine, decisionTrees
  2. Generative:
    - build a generative statistical model
    - e.g., naïve bayes classifier, Bayesian networks
  3. Instance based classifiers
    - Use observation directly (no models)
    - e.g. K nearest neighbors

# Selected Deep Trends

<https://qdata.github.io/deep2Read/>

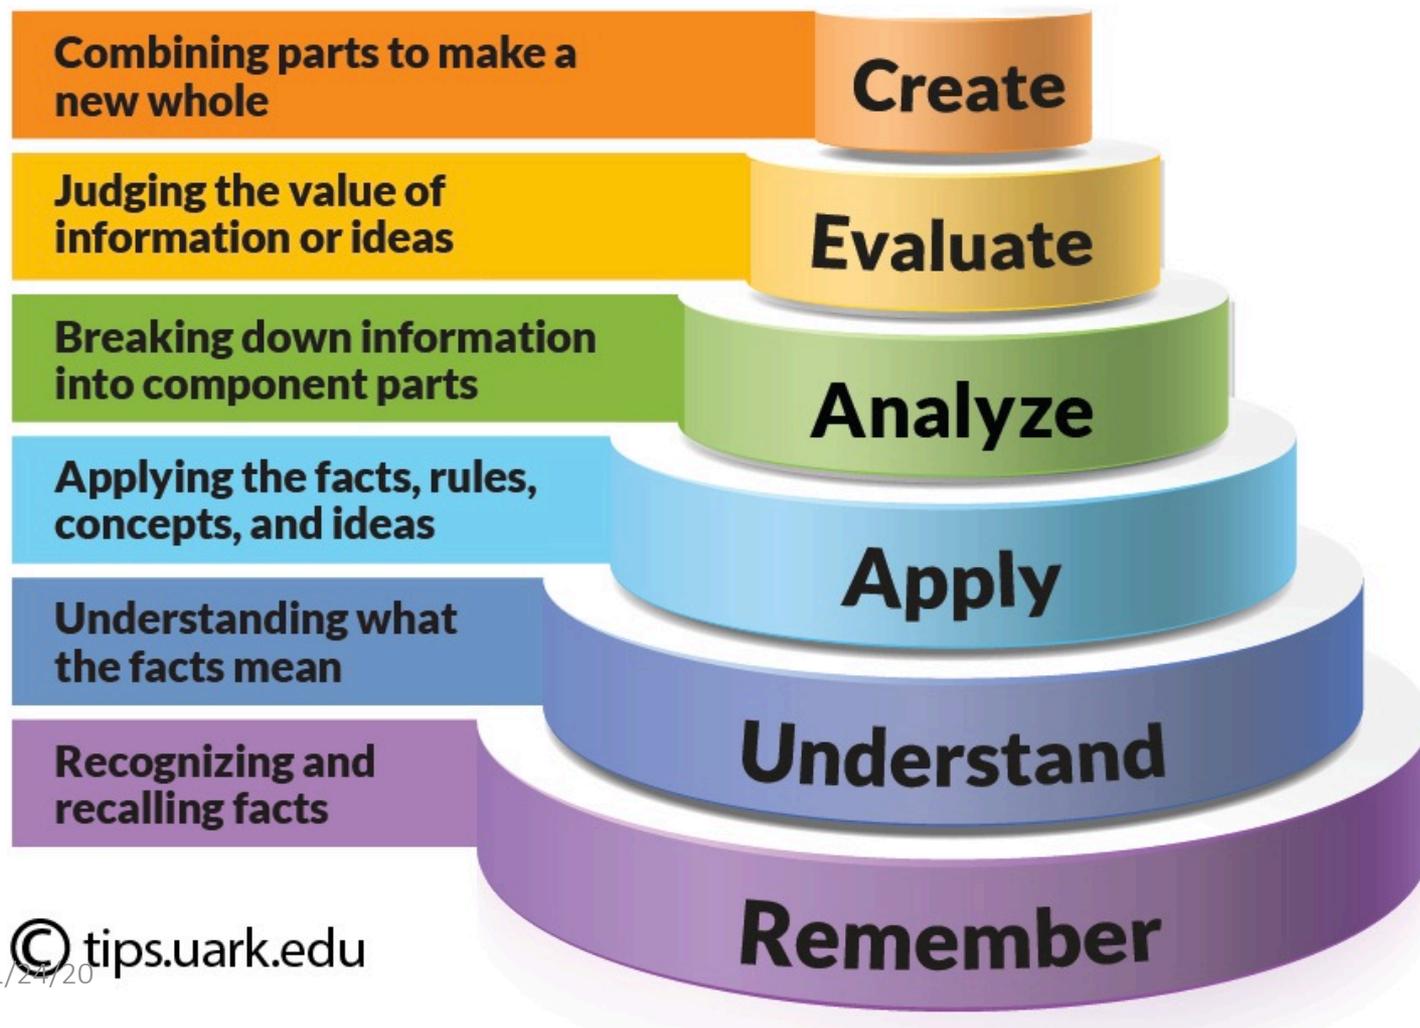

# What we have covered (more)

- Learning theory / Model selection
  - K-folds cross validation / Model Selection
  - Expected prediction error
  - Bias and variance tradeoff (overfit / underfit)
  - Generative vs. Discriminative Classifiers
  - Remedy when Overfit / Underfit
    - Control / adjust model complexity, capacity
    - Control / adjust training size
  - Three plots:
    - Train / Vali Loss vs. Epochs
    - Train / Vali Loss vs. hyperparameter Values
    - Train / Vali Loss vs. Varying Size of Trainin

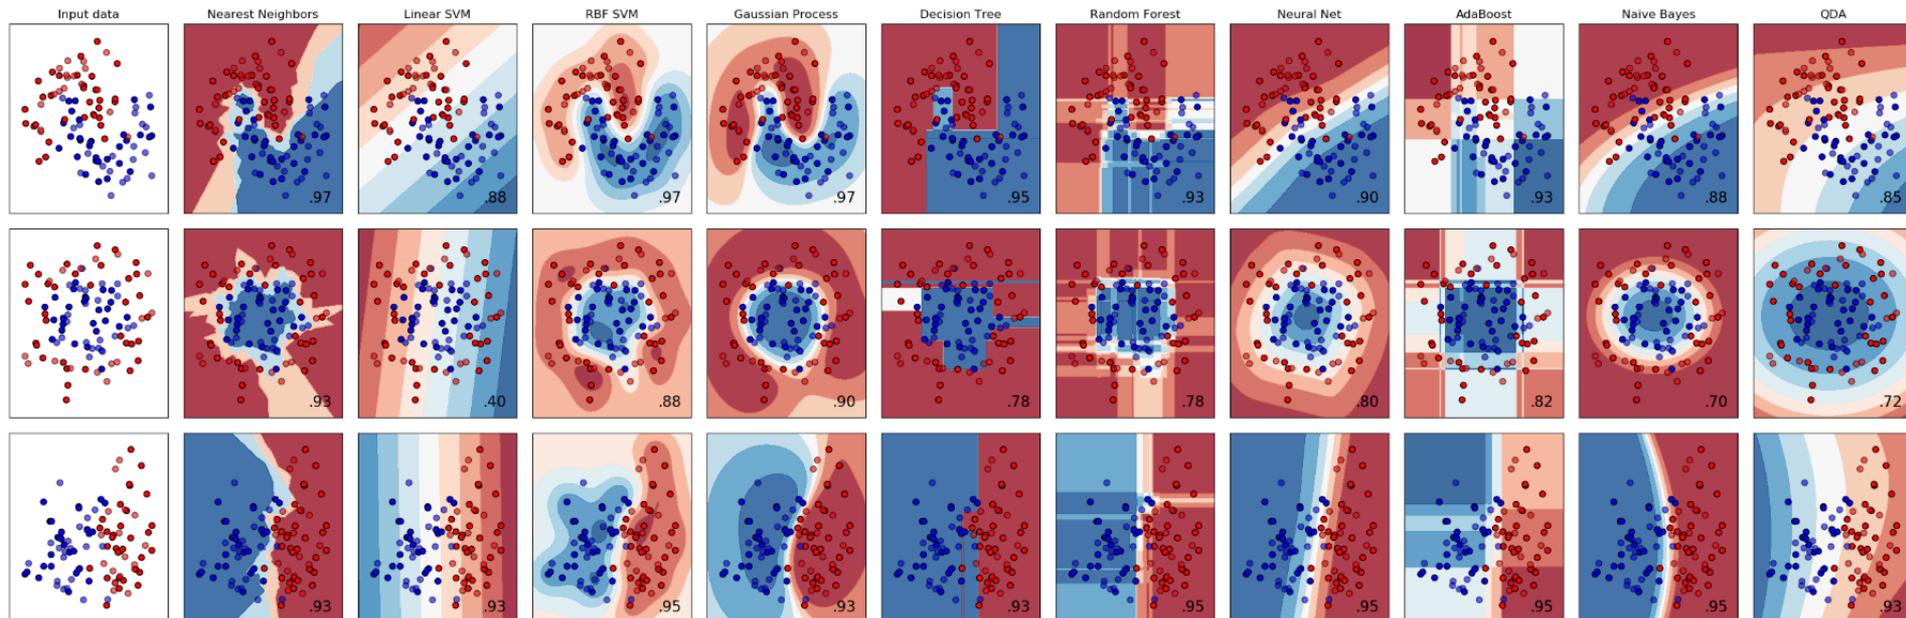

# What we have covered for each component

<b>Data</b>	Tabular, 1-D sequential, 2-D Grid like Imaging, 3-D VR, Graph, Set
<b>Task</b>	Regression, classification, clustering, dimen-reduction
<b>Representation</b>	Linear func, nonlinear function (e.g. polynomial expansion), local linear, logistic function (e.g. $p(c x)$ ), tree, multi-layer, prob-density family (e.g. Bernoulli, multinomial, Gaussian, mixture of Gaussians), local func smoothness, kernel matrix, local smoothness, partition of feature space,
<b>Score Function</b>	MSE, Margin, log-likelihood, EPE (e.g. L2 loss for KNN, 0-1 loss for Bayes classifier), cross-entropy, cluster points distance to centers, variance, conditional log-likelihood, complete data-likelihood, regularized loss func (e.g. L1, L2) , goodness of inter-cluster similar
<b>Search/ Optimization</b>	Normal equation, gradient descent, stochastic GD, Newton, Linear programming, Quadratic programming (quadratic objective with linear constraints), greedy, EM, asyn-SGD, eigenDecomp, backprop
<b>Models, Parameters</b>	Linear weight vector, basis weight vector, local weight vector, dual weights, training samples, tree-dendrogram, multi-layer weights, principle components, member (soft/hard) assignment, cluster centroid, cluster covariance (shape), ...

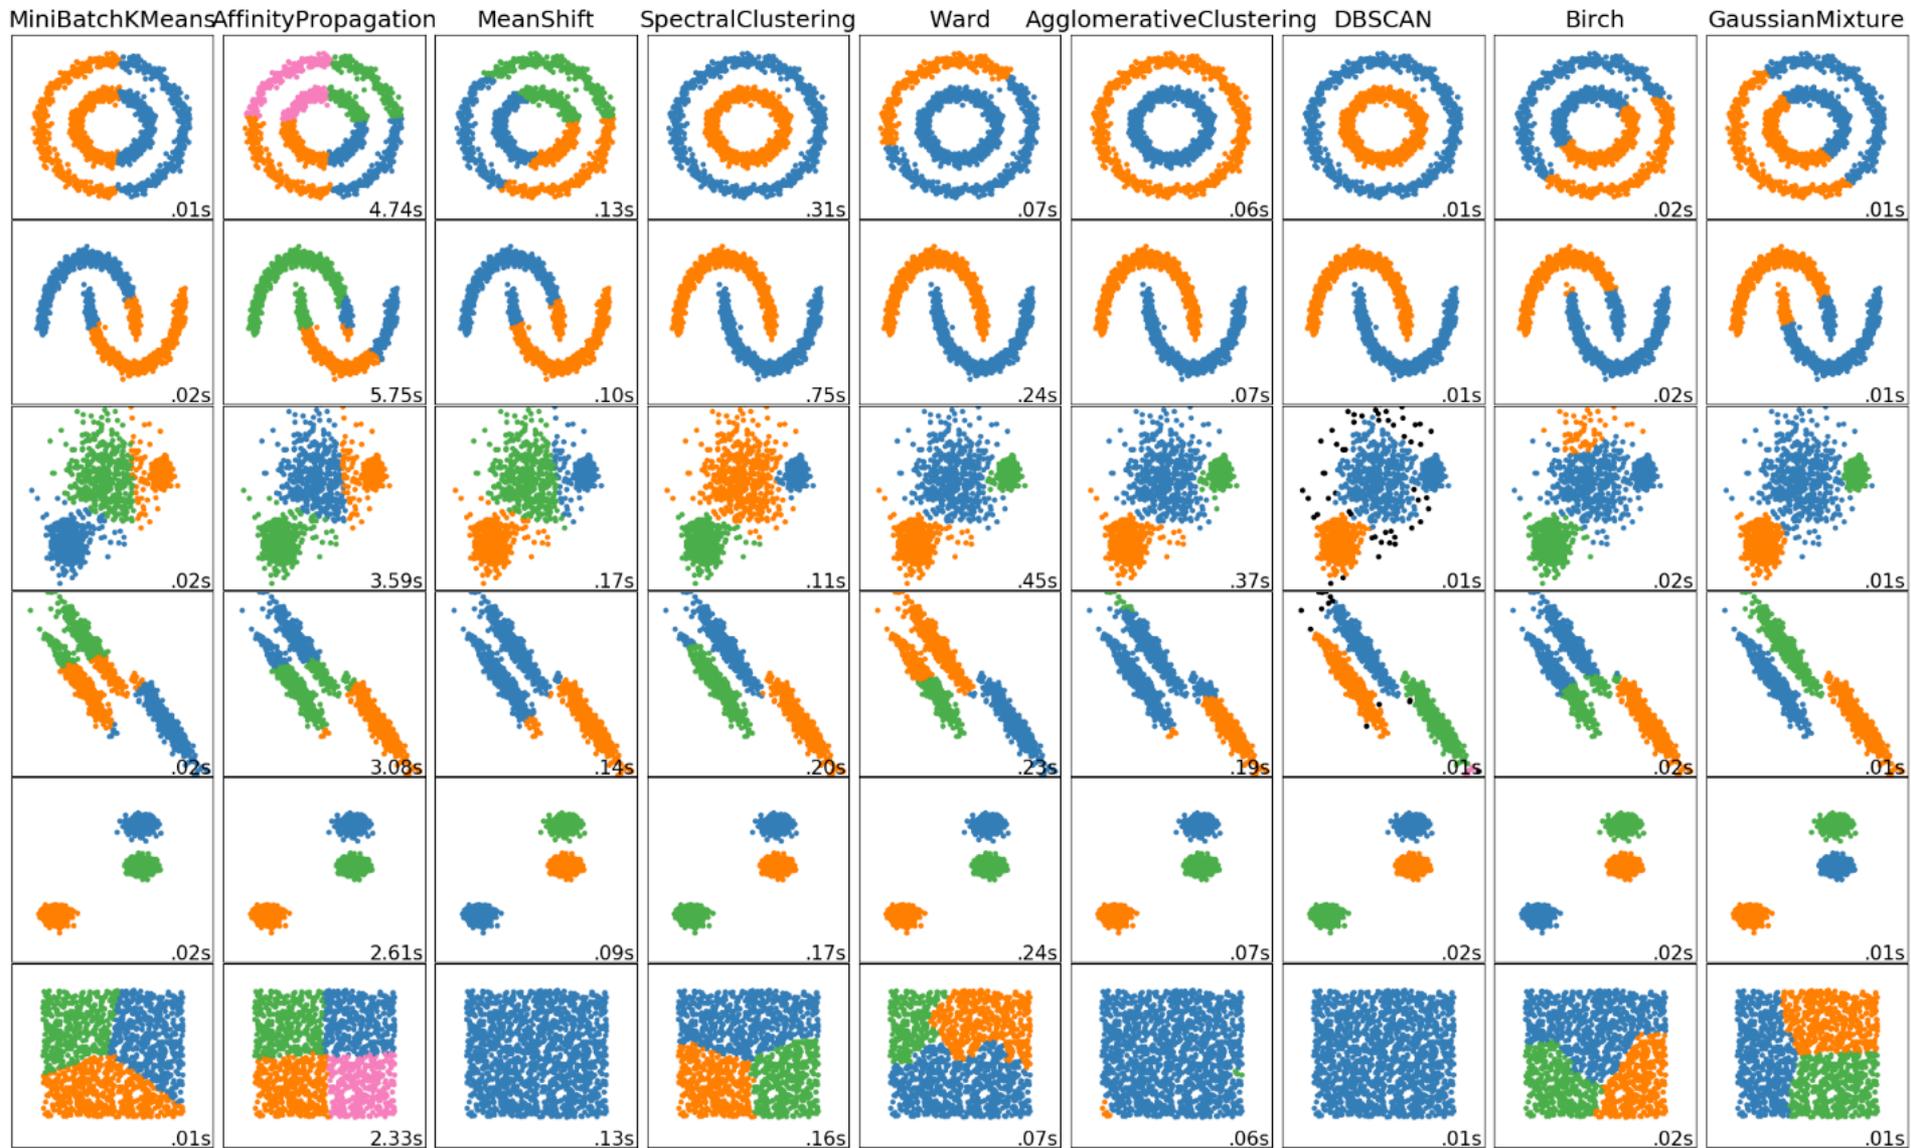

# My Teaching Guide: Bloom's Taxonomy on Cognitive Learning

[https://scikit-learn.org/stable/auto\\_examples/classification/plot\\_classifier\\_comparison.html](https://scikit-learn.org/stable/auto_examples/classification/plot_classifier_comparison.html)

- ✓ different assumptions on data
- ✓ different scalability profiles at **training** time
- ✓ different latencies at prediction (**test**) time
- ✓ different model **sizes** (embedability in mobile devices)
- ✓ different level of model **interpretability / robustness**

- ✓ different assumptions on data
- ✓ different scalability profiles
- ✓ different model sizes (embedability in mobile devices)

# Final Review

- ❑ Review of covered so far
-  ❑ Five Tribes of Machine Learning
- ❑ Four books to recommend

# Highly Recommend One Book:

## 0. By Dr. Domingos: Master Algorithm

So How Do Computers Discover New Knowledge?

1. **Symbolists**--Fill in gaps in existing knowledge
2. **Connectionists**--Emulate the brain
3. **Evolutionists**--Simulate evolution
4. **Bayesians**--Systematically reduce uncertainty
5. **Analogizers**--Notice similarities between old and new

# The Five Tribes of Machine Learning:

Tribe	Origins	Key Algorithm
Symbolists	Logic, philosophy	Inverse <b>deduction</b>
Connectionists	Neuroscience	Backpropagation
Evolutionists	Evolutionary <b>biology</b>	Genetic programming
Bayesians	Statistics	Probabilistic <b>inference</b>
Analogizers	Psychology	Kernel machines

SRC: Pedro Domingos ACM Webinar Nov 2015

<http://learning.acm.org/multimedia.cfm>

# Symbolists

Tom Mitchell

Steve Muggleton

Ross Quinlan

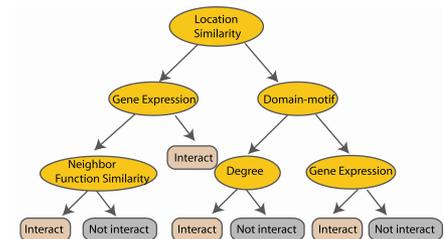

Tribe	Origins	Key Algorithm
Symbolists	Logic, philosophy	Inverse <b>deduction</b>

# e.g., Decision Tree-building algorithms (1990s)

**ID3:** Iterative Dichotomiser 3. Developed in the 80s by Ross Quinlan.

**C4.5:** Successor of ID3, also developed by Quinlan ('93). Main improvements over ID3:

**Adaboost:** by Robert Schapire (1999)

# Connectionists

Yann LeCun

Geoff Hinton

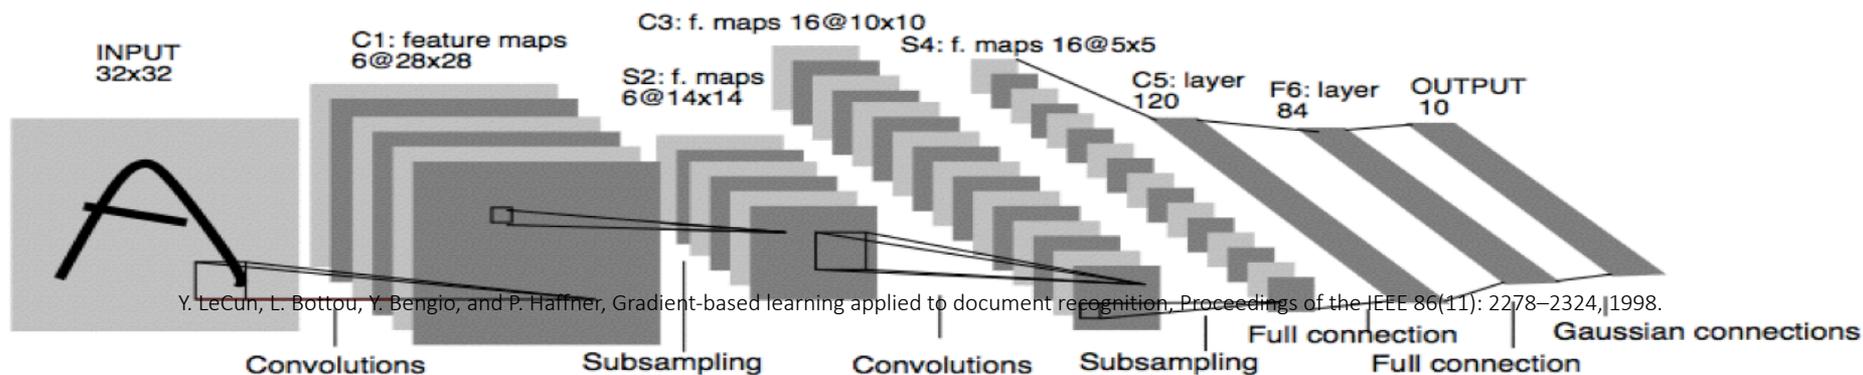

Yoshua Bengio

Tribe	Origins	Key Algorithm
Connectionists	Neuroscience	Backpropagation

# Deep Learning (CNN) in the 90's

- Prof. Yann LeCun invented **Convolutional Neural Networks (CNN)** in 1998
- First NN successfully trained with many layers

# Evolutionaries

John Koza

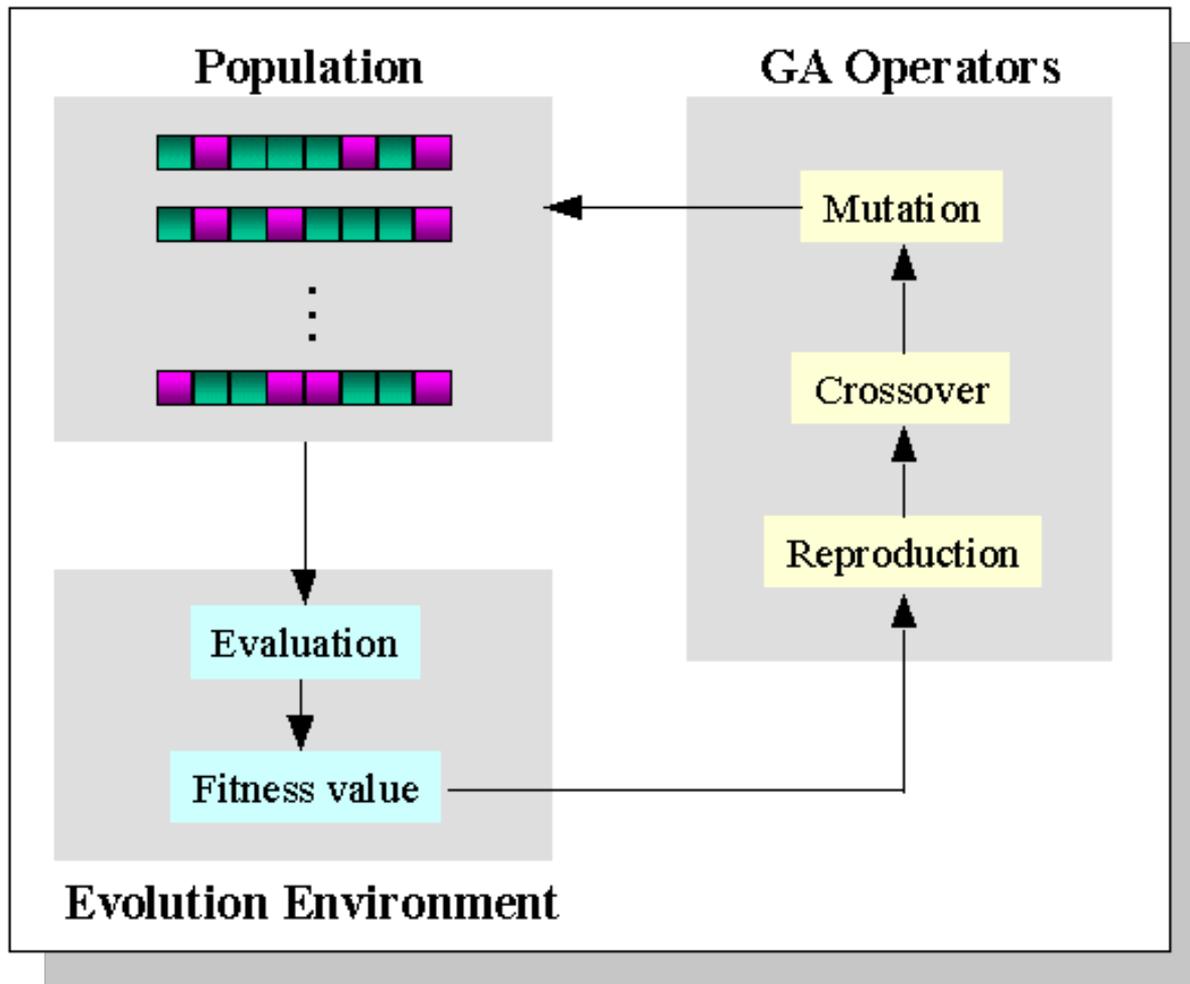

John Holland

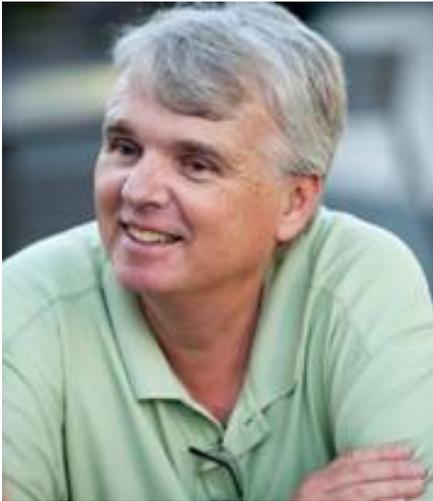

Hod Lipson

Tribe	Origins	Key Algorithm
Evolutionists	Evolutionary <b>biology</b>	Genetic programming

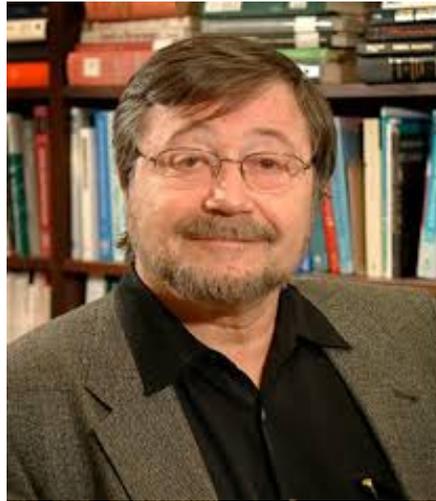

# Genetic Algorithms

# Bayesians

David Heckerman

Judea Pearl

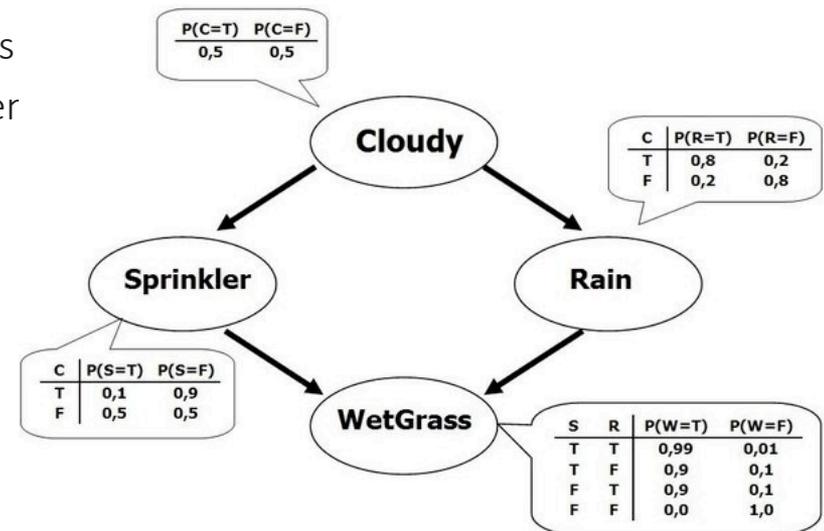

Michael Jordan

Tribe	Origins	Key Algorithm
Bayesians	Statistics	Probabilistic <b>inference</b>

# Reasoning with uncertainty (Probabilistic Inference)

- “Bayesian network” was termed by [Judea Pearl](#) in 1985
- Bayes' conditioning is the basis for updating information in the graph
- The distinction between causal and evidential modes of reasoning
- In the late 1980s, established as a field of study.
  - Pearl's Probabilistic Reasoning in Intelligent Systems
  - [Neapolitan](#)'s Probabilistic Reasoning in Expert System

## Likelihood

How probable is the evidence given that our hypothesis is true?

$$P(H | e) = \frac{P(e | H) P(H)}{P(e)}$$

## Posterior

How probable is our hypothesis given the observed evidence?  
(Not directly computable)

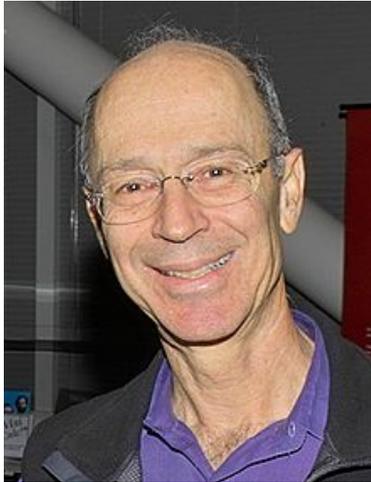

## Prior

How probable was our hypothesis before observing the evidence?

## Marginal

How probable is the new evidence under all possible hypotheses?  
 $P(e) = \sum P(e | H_i) P(H_i)$

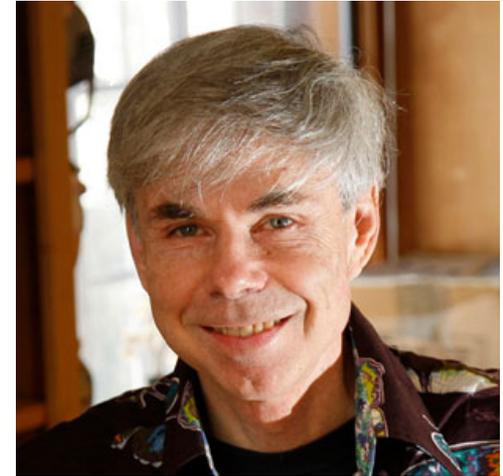

# Analogizers

Peter Hart

Vladimir Vapnik

Douglas Hofstadter

Tribe	Origins	Key Algorithm
Analogizers	Psychology	Kernel machines

# A little bit History

- **SVM** : first introduced in 1992, popular because of its success in handwritten digit recognition (1994); Regarded as an important example of “kernel methods”
- **Recommender Systems:**
  - E.g., Matrix Factorization

# The Big Picture

Tribe	Focus:	Origins	Solution	wrt our module in Nutshell
Symbolists	Knowledge composition	Logic, philosophy	Inverse deduction	Representations;
Connectionists	Credit assignment	Neuroscience	Backpropagation	Representations; Numerical Optimization
Evolutionaries	Search Structure discovery	Evolutionary biology	Genetic programming	Discrete Optimization;
Bayesians	Uncertainty	Statistics	Probabilistic inference	Likelihood type Score function;
Analogizers	Similarity	Psychology	Kernel machines	Representations; Reconstruction loss

## Four Extra-curriculum books

- 1. Book - Algorithms to Live By: The Computer Science of Human Decisions
  - [https://books.google.com/books/about/Algorithms to Live By The Computer Scien.html?id=xmeJGAAQBAJ&source=kp\\_book\\_description](https://books.google.com/books/about/Algorithms_to_Live_By_The_Computer_Scienc.html?id=xmeJGAAQBAJ&source=kp_book_description)
  - This book provides a fascinating exploration of how computer algorithms can be applied to our everyday lives.

# Highly Recommend

## Four Extra-curriculum books

- 2. Book: **So Good They Cannot Ignore You**
  - <https://www.amazon.com/Good-They-Cant-Ignore-You/dp/1455509124>
  - The idea of Career capital - rare and valuable skills need deliberate practice
  - 10,000 hours of deliberate practice → Expert!

# Highly Recommend

## Four Extra-curriculum books

- 3. Book: **Ego Is the Enemy** by RYAN HOLIDAY 2016
  - <https://www.amazon.com/Ego-Enemy-Ryan-Holiday/dp/1591847818>
  - Don't get fancy. Ego turns minor accomplishments into major events. ...Stay humble through your work.
  - Work! While aspiring, the most important thing you can do to fight your ego is to focus on creating value. Sit down and put in the hours. Invest in yourself by thinking long term.

# Highly Recommend

## Four Extra-curriculum books

- 4. Book: [Homo Deus- A Brief History of Tomorrow](#)
  - <https://www.goodreads.com/book/show/31138556-homo-deus>
  - “Homo Deus explores the projects, dreams and nightmares that will shape the twenty-first century— from overcoming death to creating artificial life. It asks the fundamental questions: Where do we go from here? And how will we protect this fragile world from our own destructive powers? This is the next stage of evolution. This is Homo Deus.””
  - Keep reinventing ourselves in an era of uncertainty !
